

RESEARCH PARTICIPANTS NEEDED

ADULT HEALTH STUDY

PRENATAL ALCOHOL AND NEUROIMMUNITY

We want to learn how health issues faced by adults with Fetal Alcohol Spectrum Disorder (FASD) may differ from those of adults without FASD. We are especially interested in whether alcohol impacts the developing gut and how that may lead to long term health issues.

WHO CAN PARTICIPATE?

Adults who are 19 years of age or older

- We will ask you to complete questionnaires regarding your life and health over the phone. You will **not** need to meet in person.
- We will send a kit with instructions so that you may easily collect a small fecal (“poop”) sample and mail it to us.
- You will be compensated with a gift card for your time.

Interested or have more questions?

Scan this QR code to fill out an [online interest survey](#) and learn more!

You can also contact us via e-mail at adulthealth.fasd@ubc.ca or by phone at **604-809-5574**.

Note: This research is being conducted by Dr. Joanne Weinberg (PI) at the University of British Columbia (UBC CREB H20-03795)
